the complete IT modernization solution

Success Story

IBM MAINFRAME MIGRATION FOR MISSION CRITICAL HEALTHCARE APPLICATIONS

SOURCE ENVIRONMENT

- IBM zOS
- CICS
- 440 MIPS
- 2,500 COBOL programs
- 4,850 JCLs
- 266 DB2 tables
- 130 Files

TARGET ENVIRONMENT

- IBM AIX
- IBM DB2
- ORACLE Tuxedo

BENEFITS

- ROI
- TCO reduction
- Modern & Agile technologies in Production

Client

MSA is a leading healthcare provider with over 5 million clients in France and 27 billion € of health services paid in 2010. MSA is the second healthcare provider in France.

Project Drivers

The main drivers for the decommissioning of MSA's IBM Mainframe were:

- Reduce cost of ownership (TCO)
- Free budget to fund new modernization initiatives
- Get rid of mainframe technologies

Key Requirements

The main requirements from MSA for the projects were:

- Have a good Return in Investment for the project (ROI)
- Align target architecture with modern standards
- Minimize project risks
- Minimize involvement of MSA's IT staff

How Metaware helped

Metaware successfully delivered MSA's IBM migration to AIX. For the fixed time and fixed price engagement, Metaware was in charge of the following:

- Overall project management
- Source components migration using Refine technology
- Automated regression testing

Project Benefits

The main benefits gained from MSA's migration project were:

- Good project Return on Investment (ROI)
- Reduced Total Cost of Ownership (TCO) in the Target environment compared to the Source environment
- Alignment of IT with business need by using modern and agile technologies

ABOUT METAWARE

Metaware is a global and complete legacy modernization solution. We provide transformation technology and delivery services for mainframe migrations, language & database conversions, and code agilization.

With over 200 legacy modernization projects delivered across 16 countries, we have consistently helped our clients reduce costs, replace obsolete technologies, and gain agility with a 100% success rate.
